

Temperature Self-Checks Vital to COVID-19 Prevention

Mar 20, 2020

Preventing the spread of COVID-19 requires the collective effort of all FirstEnergy employees. That's why we're encouraging all FirstEnergy employees **to take their temperature at home prior to coming to work**. If you present with a fever of 100.4 degrees or higher, please stay home and contact your primary care doctor.

The company is working on a plan that would give employees the option to self-check their temperature at home or obtain a company-provided temperature check upon arriving at work. Until we're ready to roll out these procedures and have obtained the necessary supplies, we would like employees to begin temperature self-checks before reporting to work, effective immediately.

We believe it is important to move swiftly and send a message that FirstEnergy is committed to doing the right thing to protect employees, their families and our communities. Ultimately, we will be successful through the cooperation of each and every one of you as we navigate this situation together. We will provide additional information and guidance on this effort as soon as we can.

Please check the FirstEnergy Today portal or visit the [Corporate Health & Safety SharePoint](#) site or [MyFirstrRewards.com](#) for the latest COVID-19 information. And please print and post important information for employees who do not access the portal routinely.
