

Do You Have COVID-Like Symptoms or Been Exposed to the Virus?

Apr 09, 2020

In this time of uncertainty, it's beneficial to know where to get your health-related questions answered. It's also important that you continue to look out for the health and safety of yourself and those around you.

Any employee who is experiencing COVID-like symptoms or who has come in close contact* with someone who has been diagnosed with COVID illness should contact their supervisor or local Human Resources representative and complete the Medical Illness Screening Form.

Submitting the online screening form using the link provided helps expedite the process so your concerns can be addressed as soon as possible. A nurse case manager or HR representative will then contact you as soon as possible.

The form is available on the coronavirus page of the [Corporate Health and Safety SharePoint](#) site or [myfirstrewards.com](#). Or you can send an email to corporatehealthandsafety@firstenergycorp.com or call 888-888-9108.

Remember, these resources are available to guide FirstEnergy employees regarding symptoms of and potential exposure to serious respiratory illness such as COVID-19 and influenza. For concerns about treatment and care for other illnesses, please contact your primary care physician.

If you have questions NOT related to your health, such as time coding, travel guidelines, flexible work arrangements, etc., please contact your supervisor or your local HR representative.

Continue to check the *FirstEnergy Today* portal for any updates. Visit the [Corporate Health & Safety SharePoint](#) site or [MyFirstRe wards.com](#) for the latest COVID-19 information. And please print and post important information for employees who do not access the portal routinely.

**Close contact is defined as an individual who is living or working with another individual who has COVID-19 within 6 feet and for a prolonged period of time (2 or more continuous hours). This type of contact increases risk of the spread of the illness.*

Symptoms of COVID and influenza may include fever, chills, cough, congestion, sore throat, muscle aches, headache, chest discomfort, shortness of breath, diarrhea, fatigue, and loss of sense of smell.
